# TESLA / Daybreak

Connection Walkthrough

We're excited to launch Tesla integration on Daybreak, giving certified providers a smarter way to monitor and support Tesla systems in one place. This quick guide walks you through the simple steps to get connected during the optional beta.

Sharing Tesla Data with Daybreak by Solar Insure

For Tesla systems, each site must be individually shared with Solar Insure. Fleet-wide or bulk data sharing is not supported. Certified providers are responsible for ensuring every enrolled site is connected.
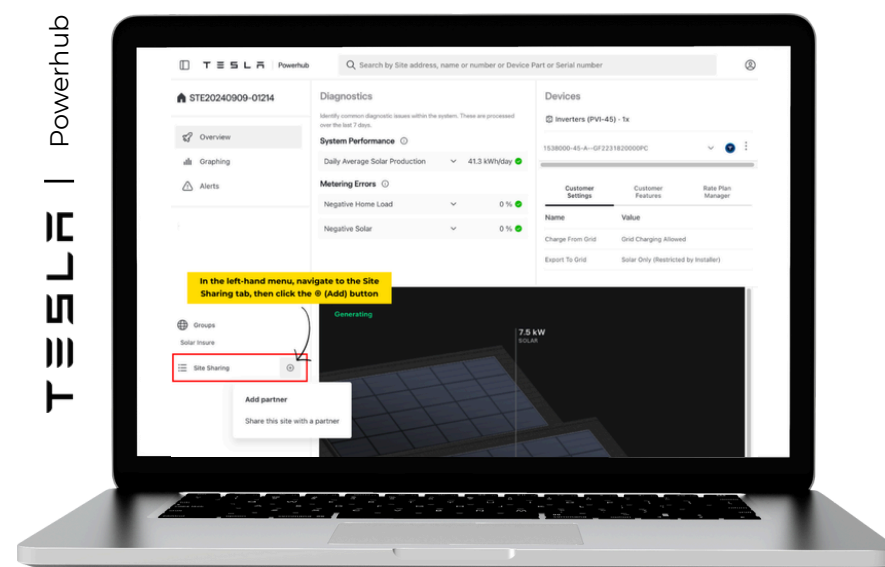

Option One – Tesla One Mobile App

Share During device commissioning. Add Solar Insure as a partner during system setup.
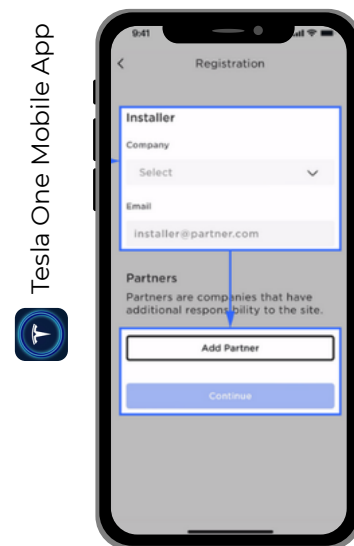

Option Two – Tesla Powerhub

In the Tesla Powerhub Portal, Find the Site Sharing tab, click the ✚ button, and add Solar Insure as a partner.

Ensuring Proper Connection

To complete the connection, you must also make sure the warranty has the correct Device Identification Number (DIN) entered.

Due to Tesla's API limitations, Solar Insure can only match warranties to sites using the Device Identification Number (DIN). We cannot match based on: Site Name (e.g., STE389230910), Address, or Serial Number

Step One

Locate the DIN in **Tesla Powerhub**. Daybreak includes visual guides during enrollment to show exactly where to look.
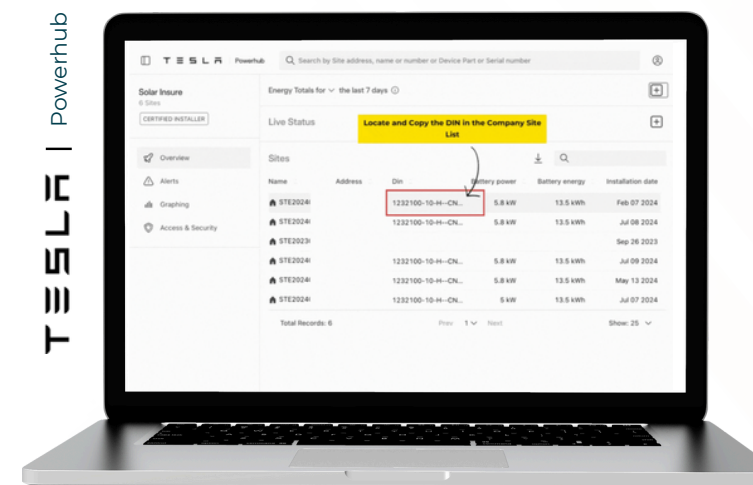

Step Two

Paste the DIN into the "Manufacturer System Identifier" field in Daybreak during warranty registration
